### CIARON'S TRACK NOTES

The circuit has been completely resurfaced since the 2017 race. Previously there were several quite different types of surface at different parts of the track, and the new surface should make the grip more uniform, especially in wet conditions when drainage should be more consistent around the lap.

Any of the old bumps may have been removed or smoothed too. Most circuits that have been resurfaced recently have shown more grip than before, so lap times could be quicker than last year.
